## Challenge

- ABAP code that needed to be assessed without additional human resources
- Multiple SAP Landscapes that held critical business data
- No visibility of actual vulnerabilities
- Integration of SAP data into ArcSight
- Legal obligation to establish audit logging

## Solution - Next generation Cybersecurity for SAP

Deployment of actionable intelligence showing actual threats, and unknown vulnerabilities that were unique to the organization. Data driven security hardening based on actual events. Within a few weeks the solution was active and monitoring the entire landscape, producing actual vulnerabilities in real time so that they could be addressed before the company faced any potential damage.

*"We have unique code and therefore unique threat potential that needs to be addressed for our company, by our company. We are confident that SecurityBridge gives us a comprehensive security solution that allows us to keep our resources lean and maximizes the ROI of our existing infrastructure"*

The CISO explained

## Challenge Details

As part of its drive towards compliance, this European Insurance company, continuously looks for advances in technology to ensure that its valuable client focused information is secured. The company CISO had worked with traditional patching-based tools that would generate a lot false information and gave little real insight into actual threats. The CISO decided to take a more radical approach to implement smarter technology that provided actionable intelligence based on anomaly detection and real time alerts that would provide triage intelligence. SecurityBridge provides us with Intelligence that is comprehensive, it's not just giving us more data on "known vulnerabilities" Its assessing our entire Landscape across SAP applications, and code, and its giving us actionable intelligence saving us time and effort and most importantly bullet-proof security.

We wanted to make use of the SAP data within our SIEM tool, ArcSight, and we were hugely impressed with how quickly SecurityBridge enabled that. What was also of enormous benefit is that not all the log sources are extracted, only the relevant alerts, which makes monitoring so much easier. Within a few days we were operational and suddenly getting real insight into our actual vulnerabilities.

## The Result

Within days SecurityBridge was deployed and actionable intelligence was being delivered allowing the SOC team to confidently triage the alerts and to address them appropriately. The company was also gaining a higher ROI of ArcSight as SAP data was being delivered in Real Time and had visibility across the entire landscape of applications and custom code. "We have unique code and therefore unique threat potential that needs to be addressed for our company, by our company. We are confident that SecurityBridge gives us a comprehensive security solution that allows us to keep our resources lean and maximizes the ROI of our existing infrastructure"

## SecurityBridge

### A ONE-STOP SECURITY SOLUTION FOR SAP

Our holistic approach improves your SAP security posture

- ☑ Real-Time Threat Detection
- ☑ Code Vulnerability Analysis
- ☑ Data Loss Prevention
- ☑ SIEM Integration

Request a live demo. **Eliminate cybersecurity threats within days, with real-time intelligence.** Call us or contact us today.
